

## CHAPTER III

## RESULTS

The absorbance of standard saccharin solution (2 mg/100 ml) was determined. The mean value of five measurements was 0.51. The percentage of recovery was worked out by adding standard saccharin solution having concentration from 1-5 mg/100 ml. The results ranged from 94.9-102.0 per cent, the mean value was 98.5 per cent, and standard deviation was 2.2. The absorbance and percentage of recovery were shown in Table 4, and Table 5 respectively.

Table 4

Mean absorbance of 2 mg/100 ml standard saccharin solution

No.	Absorbance		
	A235	A244	A235-A244
1	0.72	0.21	0.51
2	0.73	0.22	0.51
3	0.74	0.23	0.51
4	0.76	0.25	0.51
5	0.74	0.22	0.52
Mean value of net absorbance (A235-A244)			= 0.51

Table 5  
The percentage recovery of added saccharin

mg Saccharin added per 100 ml	Absorbance			mg Sacch. detected	Percentage recovery	Average
	A235	A244	A235-A244			
1	0.40	0.14	0.26	1.02	102.0	99.0
	0.41	0.16	0.25	0.98	98.0	
	0.40	0.15	0.25	0.98	98.0

	0.70	0.21	0.49	1.92	96.0	
3	1.02	0.24	0.78	3.06	102.0	101.0
	1.02	0.24	0.78	3.06	102.0	
	1.02	0.25	0.77	3.02	100.7	
	1.01	0.25	0.76	2.98	99.3	
4	1.32	0.30	1.02	4.00	100.0	98.8
	1.33	0.30	1.03	4.03	101.0	
	1.28	0.29	0.99	3.88	97.0	
	1.26	0.27	0.99	3.88	97.0	
5	1.57	0.34	1.23	4.82	96.5	96.3
	1.56	0.33	1.23	4.82	96.5	
	1.58	0.34	1.24	4.86	97.3	
	1.56	0.35	1.21	4.75	94.9	
Mean value					98.5	
Standard deviation					2.2	

The samples, collected from several locations, classified in three types :

1. Concentrate syrups
2. Carbonated beverages
3. Dilute soft drinks (ready for consumption)

1. Concentrate syrups : seventy-eight samples of this type were detected for saccharin. Saccharin was found in forty-eight samples which were further determined for the saccharin contents. The saccharin contents varied from 0.016 to 0.053 per cent. The mean value was 0.039 per cent. The details of results of detection and quantitative determination were shown in Table 6, and Table 7 respectively.

	70B	10	0.84	0.27	0.57	0.022	

Saccharin found were between 0.016 to 0.053 per cent

Mean value was 0.039 per cent

2. Carbonated beverages : four from seventeen samples of this type were found to contain saccharin. The quantities of saccharin were between 0.005 to 0.008 per cent. The mean value was 0.007 per cent. The details of detection and determination were shown in Table 8, and Table 9 respectively.

	4B	50	1.05	0.40	0.65	0.005	

Saccharin found varied from 0.005 to 0.008 per cent

Mean value was 0.007 per cent

3. Dilute soft drinks (ready for consumption) : among the fifty-six samples collected from several locations, twenty-one samples were found to contain saccharin. In some sample the added color, fat and protein, interfered in the ethereal extract, forming viscous emulsion which was difficult to separate the layers in the process of extraction with organic solvents. These problems could be avoided by adding 5 per cent neutral lead acetate solution in the process of preparing the sample. The percentage of saccharin in this type of beverages were 0.003 to 0.011. The mean value was 0.007 per cent. The results of detection and determination were shown in Table 10, and Table 11 respectively.

Table 11 (Continued)

No.	Sample No.	ml. of original sample used	Absorbance			% Saccharin found	
			A235	A244	A235-A244	% saccharin	average
12	34A	50	1.20	0.30	0.90	0.007	0.007
	34B	50	1.18	0.29	0.89	0.007	
13	35A	50	1.55	0.38	1.17	0.009	0.009
	35B	50	1.57	0.37	1.20	0.009	
14	37A	100	0.64	0.20	0.44	0.003	0.004
	37B	100	0.68	0.21	0.47	0.004	
15	38A	50	0.80	0.27	0.53	0.004	0.005
	38B	50	0.85	0.25	0.60	0.005	
16	41A	50	1.64	0.41	1.23	0.010	0.010
	41B	50	1.73	0.44	1.29	0.010	
17	42A	50	1.74	0.42	1.32	0.010	0.010
	42B	50	1.83	0.45	1.38	0.011	
18	43A	50	1.16	0.34	0.82	0.006	0.007
	43B	50	1.20	0.33	0.87	0.007	
19	44A	100	1.27	0.30	0.97	0.004	0.004
	44B	100	1.20	0.28	0.92	0.004	
20	49A	100	1.37	0.34	1.03	0.004	0.004
	49B	100	1.42	0.36	1.06	0.004	
21	50A	100	1.60	0.50	1.10	0.004	0.005
	50B	100	1.72	0.55	1.17	0.005	

Saccharin found were between 0.003 to 0.011 per cent

Mean value was 0.007 per cent
