PATTINEE SUANPRASERT: ESTABLISH A NEIGHBORHOOD CLINIC TO INCREASE ACCESS TO BASIC HEALTH SERVICES FOR MYANMAR MIGRANT FACTORY WORKERS IN MAE SOD DISTRICT, TAK PROVINCE, THAILAND. THESIS ADVISOR:

MARC VAN DER PUTTEN, Ph.D., 147 pp. ISBN 974-9599-31-4

Migrant workers from Myanmar in Thailand have to face various kinds of problems affecting their quality of life. This thesis focuses to the problems and concerns of Myanmar migrant factory workers at the outskirts of Mae Sod district in Tak province of Thailand. A rapid assessment on needs and possible solutions was conducted among Myanmar migrant factory workers to look for alternatives to alleviate their problems. The workers agreed that for most of their problems, easy solutions are not available. Access to basic health services was one of their concerns due to constraints such as language barrier, distance, cost and inappropriate health providers, despite many of them have a health insurance. Most workers agreed that it was necessary for them in having basic health care services near their factories and this could possibly be assisted by their social support groups and local health NGOs. Provision of free basic heath care services by a Burmese provider in the location close to most target factories is the project proposed to reduce these difficulties. The clinic support group will collaborate with other Burmese working groups on migrant health as well as migrant factory worker networks for sharing resources, management and monitoring for the project. The project will be evaluated on its effectiveness to improve access to basic health services among target migrant factory workers in terms of cultural acceptability, geographical accessibility, financial affordability, and functional appropriateness.

#### **ACKNOWLEDGEMENTS**

Foremost, I would like to convey my sincere impression for the esteem and morale of all migrants from Myanmar in Thailand which inspired me to get insight into their plight and to motivate my MPH study until this thesis happened.

I will never forget the College of Public Health, Chulalongkorn University for giving me a chance to open my views and refine my thoughts by enrolling in the MPH Program.

I deeply acknowledge my gratitude and appreciation to Ajarn Dr. Marc Van der Putten, my thesis advisor, for his patience and untiring valuable guidance throughout the whole process of developing this thesis.

My special thanks to Prof. Dr. Chitr Sitthi-amorn, the former Dean of CPH, and Prof. Dr. Edgar J. Love for their creative suggestions during my thesis development. I heartily appreciate all Ajarns and academic staff for their kindness and support for my study. I would like to express my appreciation to my friends and library staff for providing me essential literature for my study.

I am in-debt to all Burmese friends who lighten my ideas and who took in part in my data exercise in Mae Sod. I may not forget my good friend, Dr Tara Sullivan, for her instruction and support during my data exercise development and analysis. My heartfelt to my late best friend and classmate from Bhutan, Dr. Tenzin Penjor, for his company during our program and encouragement on my thesis progress.

I pay all gratefulness to my precious family and friends for their endlessly support thorough my study. At last, without my husband who persuaded me to study in this program, my study would not have succeeded, I am compelled to his encouragement and diverse supports.
