## Appendix A

### Calibration curve

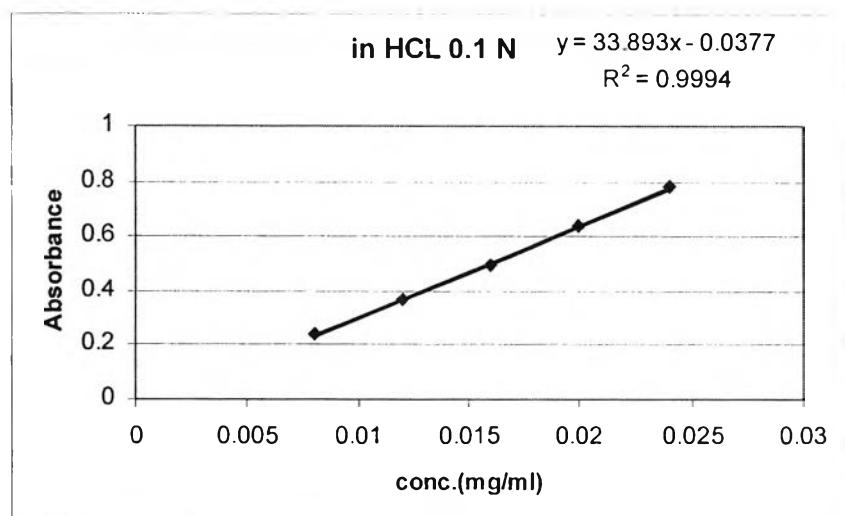

#### 1. Calibration curve of diclofenac sodium for dissolution studies

The concentrations (mg/ml) versus absorbance of diclofenac sodium in 0.1 N HCl and in pH 6.8 phosphate buffer at a maximum wavelength of 275 nm are presented in Table 25 – 26. The standard curves of diclofenac sodium in these media are illustrated in Figure 120 – 121.

**Table 25** Absorbance of diclofenac sodium in 0.1 N HCl at a maximum wavelength of 275 nm

Concentration (mg/ml)	Absorbance at 275 nm
0.008	0.2391
0.012	0.3664
0.016	0.4969
0.02	0.6411
0.024	0.7796

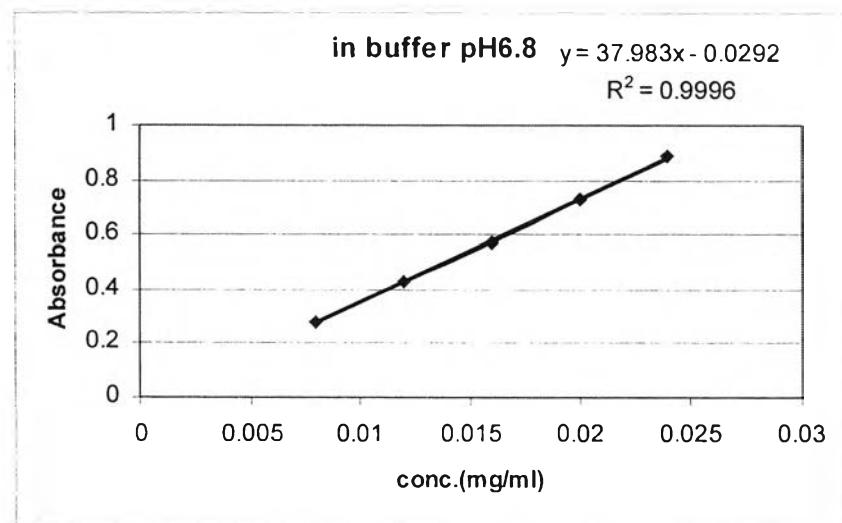

**Figure 120** Calibration curve of diclofenac sodium in 0.1 N HCl at a maximum wavelength of 275 nm

**Table 26** Absorbance of diclofenac sodium in pH 6.8 phosphate buffer at a maximum wavelength of 275 nm

Concentration(mg/ml)	Absorbance at 275 nm
0.008	0.2785
0.012	0.4266
0.016	0.5717
0.02	0.7287
0.024	0.8871

**Figure 121** Calibration curve of diclofenac sodium in pH 6.8 phosphate buffer at a maximum wavelength of 275 nm

## 2. Validation of HPLC method

The diclofenac sodium concentrations for drug content and content uniformity of diclofenac pellets could be determined by HPLC assay with UV detection. The wavelength used to analyze diclofenac sodium in this study was 254 nm. The validation of HPLC methods used are presented as follows:

### **1.1 Specificity**

From Figures 122 – 123, diclofenac related compound A and diclofenac sodium were eluted at 9 - 10 min and 18 – 19 min, respectively. Figures 124 -130 shows the chromatogram in presence of diclofenac sodium, diclofenac related compound A and non-active ingredients, including lactose, dbcp, GMS, Precirol® ATO 5, Compritol 888 ATO®, Gelucire50/02 and Tristearin®. It indicated that the other ingredients did not interfere the peaks of diclofenac sodium and diclofenac related compound A.

### **1.2 Accuracy**

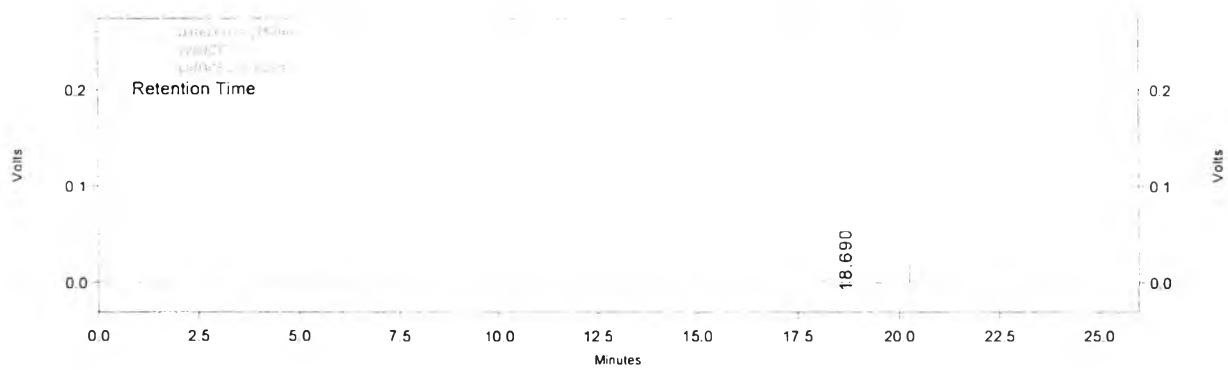

Table 27 and Table 28 shows the percentage of analytical recovery of diclofenac sodium and diclofenac related compound A. The mean percentage of analytical recovery closely to 100% (95-105%) with a low %RSD (<2.00%) indicated the high accuracy of this method.

### **1.3 Precision**

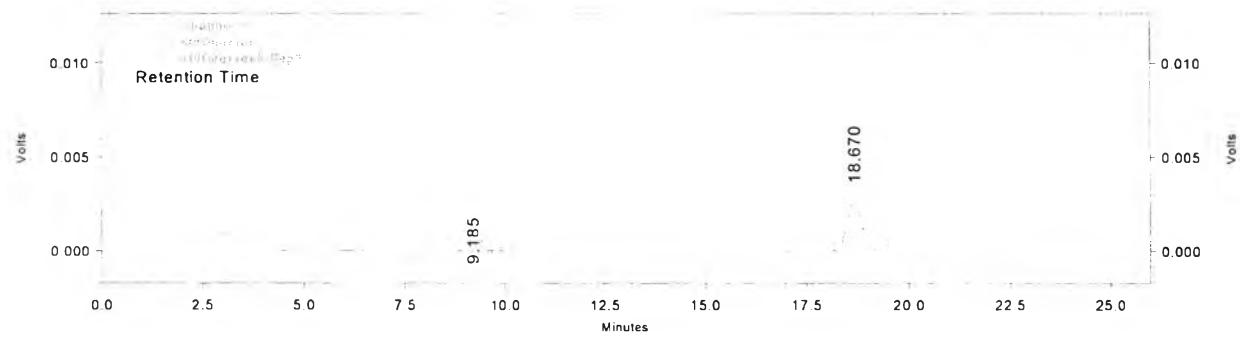

Table 29 and Table 30 shows data of within run precision of diclofenac sodium and diclofenac related compound A by HPLC method. Table 31 – 32 shows data of between run precision of diclofenac sodium and diclofenac related compound A by HPLC method. The percentage of coefficient of variation(%RSD) values of peak area ratio both within run and between run were low (<2.00%) which indicated that the HPLC methods could be to determine the amount of diclofenac sodium over period of time studied.

### **1.4 Linearity**

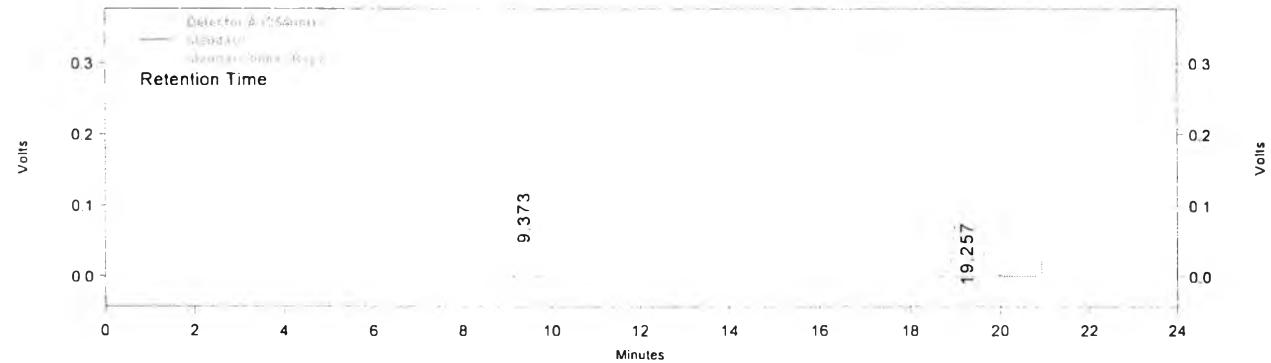

The linearity of analysis method is its ability to elicit test results that directly, or by well-defined mathematical transformation, proportional to the concentration of analysis in samples within a given range. Figure 131 showed that the relationship between area and diclofenac sodium concentrations is linearity with correlation of determination value of 1. Figure 121 showed that the relationship between area and diclofenac related compound A concentrations is linearity with correlation of determination value of 1. This result indicated that HPLC method was acceptable for qualitative analysis of diclofenac sodium in range studied.
