อัจฉรา เติมโชค : การวิเคราะห์เชิงพื้นผิวของพอลิคาร์บอเนต โดยเอทีอาร์ เอฟทีไอ
อาร์ สเปกโทรสโกปี (SURFACE CHARACTERIZATION OF
POLYCARBONATE BY ATR FT-IR SPECTROSCOPY)

อาจารย์ที่ปรึกษา : อาจารย์ ดร. สนอง เอกสิทธิ์, 92 หน้า. ISBN 974-334-498-5

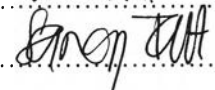

งานวิจัยนี้ศึกษาเกี่ยวกับการพัฒนาเทคนิคการวิเคราะห์เชิงพื้นผิวของพอลิเมอร์โดยเทคนิคเอทีอาร์ เอฟทีไออาร์ สเปกโทรสโกปี พอลิเมอร์ที่ใช้ในการศึกษาครั้งนี้ได้แก่พอลิคาร์บอเนต และพอลิไวนิลคลอไรด์ งานวิจัยประกอบด้วยการคำนวณหาจำนวนครั้งของการสะท้อนของแสงในปริซึมโดยใช้ข้อมูลจากผลการทดลอง การหาสภาวะที่ทำให้เกิดการสัมผัสอย่างสมบูรณ์ระหว่างสารตัวอย่างที่เป็นของแข็งกับปริซึม ซึ่งเป็นเงื่อนไขสำคัญในการวิเคราะห์เชิงพื้นผิวด้วยเทคนิคเอทีอาร์ เอฟทีไออาร์ สเปกโทรสโกปี และการหาความถี่ของการสั่นตัวอย่างในเทคนิคเอทีอาร์ จากการศึกษาพบว่าจำนวนครั้งของการสะท้อนของแสงในปริซึมที่คำนวณได้จากผลการทดลองจะต่ำกว่าค่าที่คำนวณได้จากทฤษฎีเสมอ การสัมผัสระหว่างสารตัวอย่างที่เป็นของแข็งกับปริซึมสามารถปรับปรุงให้ดีขึ้นได้โดยการแทนที่ช่องอากาศที่บริเวณผิวสัมผัสระหว่างสารตัวอย่างกับปริซึมด้วยของเหลว แล้วทำให้ของเหลวระเหยไป แรงคาปิลลารีจะช่วยทำให้สารตัวอย่างสัมผัสกับปริซึมดีขึ้น และค่าความถี่ของการสั่นตัวอย่างสามารถคำนวณได้จากลักษณะการทดลองอย่างมีระบบของสนามไฟฟ้า โดยค่าดังกล่าวสามารถเขียนให้อยู่ในรูปของเงื่อนไขทางการทดลอง สมบัติของสาร และความเข้มของการดูดกลืนแสงของสาร

ADCHARA PADERMSHOKE : SURFACE CHARACTERIZATION OF
POLYCARBONATE BY ATR FT-IR SPECTROSCOPY. THESIS
ADVISOR : SANONG EKGASIT, Ph.D. 92 pp. ISBN 974-334-498-5.

This research is the study concerning with the development of a technique for surface characterization of polymers by ATR FT-IR spectroscopy. Polymers being employed in this study are polycarbonate (PC) and polyvinyl chloride (PVC). The research consists of the calculation of number of reflections in ATR prism from experimental results, the determination of the condition under which an optical contact between solid sample and ATR prism is obtained, and the determination of sampling depth in ATR experiment. It was found that the number of reflections in ATR prism calculated from experimental results is always smaller than that calculated via theoretical means. The contact between solid sample and ATR prism can be improved by replacing an air gap existing at the interface between the sample and ATR prism with easily evaporated liquid. The capillary force improves contact between the two surfaces. The sampling depth can be calculated from the decay characteristic of the electric field. The calculated value can be expressed in terms of experimental parameters, material characteristics, and the spectral intensity of material.

ACKNOWLEDGEMENTS

I would like to affectionately give all gratitude to my parents for their wholehearted understanding, encouragement, and patient support throughout my entire study.

Gratefully thanks to Associate Professor Dr. Supawan Tantayanon, Associate Professor Dr. Amorn Petsom, Assistant Professor Dr. Warinthorn Chavasiri, and Dr. Nongnuj Jaiboon for their substantial advice as thesis committee.

I also would like to acknowledge computer and other academic facility supplies from The Austrian-Thai Center (ATC) for computer assisted chemical education and research and instrumental support from Bruker Analytical and Medical Instrument South East Asia.

Finally, this thesis would never be successfully completed without the excellent advice from my thesis advisor, Dr. Sanong Ekgasit, who always provides me the useful guidance, suggestion, encouragement, and understanding and also patiently practises my technical skill during the whole research.
