APPENDIX

Appendix A Conventional Degumming

Condition: Silk samples is treated with alkaline solution (10 g/L soap and 2 g/L sodium carbonate in a liquor ratio of 1:30 (silk (g): alkaline solution (mL))). Temperature 90-95 °C for 45 min.

Appendix B Plasma Treatment: Varying Discharge Power

Condition: Varying discharge at 60, 250, 1000 and 2000 (Watt)

Fix exposure time at 5 (min), flow rate at 500 (cc/min), temperature at 25°C, oxygen gas and electrode distance at 3.5 cm.

Identified code: S = Sample No.

(S1 = sample number 1, S2 = sample number 2)

W = Discharge power

(W1 = 60, W2 = 250, W3 = 1000 and W4 = 2000)

M = Time

(M1 = 5, M2 = 10 and M3 = 15 min)

F = Flow rate

(F1 = 500, F2 = 250 and F3 = 1000 cc/min)

T = Temperature

(T1 = 25, T2 = 50 and T3 = 75 °C)

Discharge Power at 60 (Watt)

Appendix G Plasma and Conventional Treatment

The objective of this additional experiment was to address the final results of about 10% degumming efficiency by plasma if hot water or mind solution could further remove sericin. The condition of plasma was discharge power at 2000 (Watt), exposure time at 10 (min), oxygen gas at 500 cc/min, temperature at 25°C and electrode distance at 23.5 cm. The average weight loss of silk fibers by plasma was 5.31 ± 0.15 . After that the treated silk fiber were further treated for varying time at 10, 20, 30 and 45 min using fixed concentration of degumming agent to study the effect of time treatment. In order to study the effect of concentration, 4 different concentrations were varied which were 0% (water), 10%, 50% and 100% (conventional) and also by fixing the time treatment at 45 min.

Varying time treatment

Fix concentration by following the concentration of the conventional method: Silk samples are treated with alkaline solution (10 g/L soap and 2 g/L sodium carbonate in a liquor ratio of 1:30 (silk (g): alkaline solution (mL)))

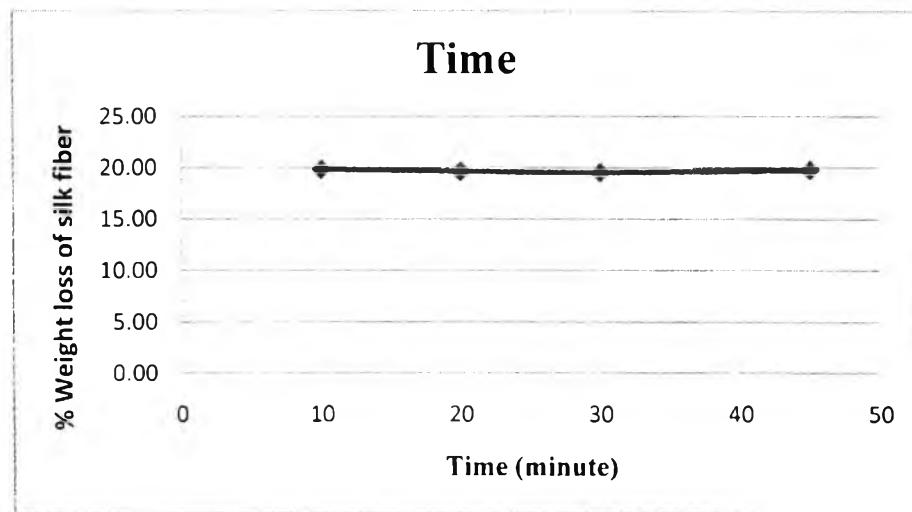

Figure G1 Effect of time treatment on silk fiber weight loss (Fix concentration by following the concentration of the conventional method).

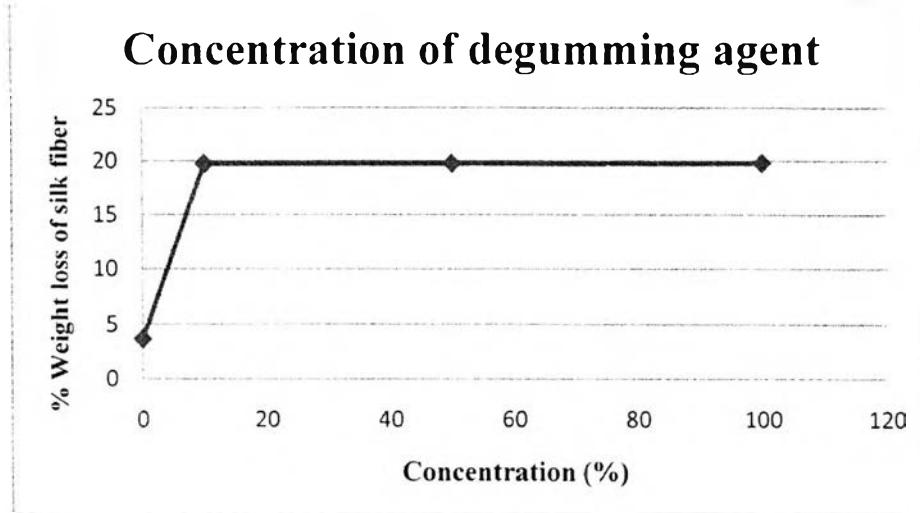

Figure G2 Effect of concentration of degumming agent on silk fiber weight loss (Fix time treatment at 45 min).

Initially, the average weight loss of silk fibers by plasma treated was $5.31 \pm 0.15\%$. The additional average weight loss of 10, 20, 30 and 45 min were $19.82 \pm$

0.71 %, 19.64 ± 1.44 %, 19.53 ± 1.16 % and 19.80 ± 0.69 % respectively which was added up to total weight loss of 25.13 ± 0.86 %, 24.95 ± 1.59 %, 24.84 ± 1.31 % and 25.11 ± 0.84 % respectively. The additional average weight loss of 0 %, 10 %, 25 % and 100 % concentration of degumming agent were 3.61 ± 0.18 %, 19.77 ± 0.44 %, 19.75 ± 0.58 % and 19.80 ± 0.69 % respectively which was added to the initial result of plasma treatment to obtain the total average weight loss of 8.92 ± 0.33 %, 25.08 ± 0.59 %, 25.06 ± 0.90 % and 25.11 ± 0.84 %. The mind solution (10% degumming solution) and 10 min was the minimized condition to further provide the additional average weight loss which was added to the initial result by plasma treatment and yielded the total average weight loss of 25.13 ± 0.86 % and 25.08 ± 0.59 %.

Example for calculation of 50 % of the alkaline solution

Conventional method: Silk samples are treated with alkaline solution (10 g/L soap and 2 g/L sodium carbonate in a liquor ratio of 1:30 (silk (g): alkaline solution (mL)))

For 100 % of the alkaline solution: Weight of silk is 1.7259 g so from the liquor ration of 1:30 then the water was used 51.777 mL, the soap was used 0.5177 g and the sodium carbonate was used 0.1035 g.

Then for 50 % of alkaline solution: Weight of silk is 1.7259, water was used 51.777 mL, the soap was used 0.2589 g and the sodium carbonate was used 0.0518 g.

CURRICULUM VITAE

Name: Ms. Saros Salakhum

Date of Birth: September 17, 1990

Nationality: Thai

University Education:

2008–2012 Bachelor Degree of Petrochemical and Polymeric materials. Faculty of Engineering and Industrial Technology. Silpakorn University. Nakorn Phathom, Thailand

Work Experience (trainee):

2010 Position: Technical and Quality Control

Company name: Thai Plastic Bags Industries (TPBI)

Proceedings:

1. Salakhum, S.; Saiwan, Chintana.; and Mongkholrattanasit, Rattanaphol (2014, April 22) Degumming of Thai Silk by Low-pressure Plasma Treatment.
