APPENDIX A

NMR and IR spectra

1. NMR and IR spectra of the water extract of *S.venosa* tuber.

1.1 ^1H NMR (D_2O) spectra (Figure 11) showed the peaks at δ 3-5 (glucoside) and at δ 6-8 (aromatics such as coumarin, quinone or cinnamic acid derivatives).

1.2 IR (Neat) spectra (Figure 12) showed λ_{\max} at 3422(OH), 2521 and 1638 cm^{-1}

Based on the ^1H NMR and IR spectral data of the water extract, its could possibly contain a mixture of glucoside and coumarin, quinone or cinnamic acid derivatives.

2. NMR and IR of the ethanol extract of *S.venosa* tuber.

1.3 $^1\text{HNMR}$ (CDCl_3) spectra (Figure 13) showed the peaks at δ 0.8-2.2 (long chain hydrocarbon) and δ 3-5.5 (glucoside).

1.4 IR(Neat) spectra (Figure 14) showed λ_{\max} at 3374(OH), 2924, 2853(CH), 1713(CO ester), 1633,1499,1273 and 1074 cm^{-1}

Based on the $^1\text{HNMR}$ and IR spectral data of the ethanol extract, its could possibly contain a mixture of long chain hydrocarbon and glucoside.

BIOGRAPHY

Miss. Metta Kheiawsawang was born on September 17, 1977 in Nakhon Prathom province, Thailand. She received the Bachelor degree of Nursing Science (second class honors) in 1999 from Mahidol University, Bangkok, Thailand. She has enrolled at Chulalongkorn University in graduate program for the Degree of Master of Science in Pharmacology and graduated in 2004.
