KEY WORD : HPLC fingerprint / *Pueraria mirifica* / Isoflavone

SUBONGKOCHEE SUBTANG: THESIS TITLE : COMPARATIVE  
ISOFLAVONE HPLC FINGERPRINTS FROM THE EXTRACTS OF WHITE  
KWAO KRUAE *Pueraria mirifica* IN THAILAND. THESIS ADVISOR :  
ASSOC. PROF. DR. WICHAI CHERDSHEWASART, THESIS CO-  
ADVISOR : ASSOC. PROF. DR. SURAPOTE WONGYAI, ASSOC. PROF.  
DR. WINAI DAHLAN. 165 pp. ISBN 974-17-2794-1

The comparative HPLC fingerprint assay for isoflavone content in *P. mirifica* was established with four different preparation methods including spray dry, methanol, ethanol and water extraction and with the aid of 5 isoflavone reference standards including puerarin, daidzin, genistin, daidzein and genistein. It was found that spray dried powder established highest isoflavone content (109.66 mg/100 g powder). Methanol extract sample established the highest amount of isoflavone, 54.58 mg/100 g powder compared with 26.09, 6.90 mg/100g powder established by water and ethanol extracted, respectively. The analysis from 29 collected samples represent the provincial distribution revealed a great diversity of both total and individual assayed-isoflavone. The maximum and minimum amount of isoflavone was found in the sample collected from Kanchanaburi (198.29 mg / 100 g powder) and Nan province (18.85 mg / 100 g powder), respectively. The different collected site in the same province was found influenced to the amount of detectable isoflavone content in the wild plants. Analysis of the cultivated plants revealed that *P. mirifica* clone Doi Tao and Chaiprakarn grown in different location, harvest in different season have different isoflavone content. *P. mirifica*, from clonal propagation with different in differentiation stage of the tubers showed difference in isoflavone content of the tubers.

## **ACKNOWLEDGEMENTS**

First of all, I would like to express my grateful sense of gratitude to my advisor, Associate Professor Dr. Wichai Cherdshewasart, for his valuable suggestion, guidance, kindness and full encouragement throughout the period of my study as well as gifts of powder samples.

I would like to express my sincere gratitude to my co-advisor Associate Professor Dr. Surapote Wongyai, Dean of Faculty of Oriental Medicine, Rangsit University for his suggestion, guidance and expert recommendations on HPLC techniques.

I would like to express my sincere gratitude to my co-advisor Associate Professor Dr. Winai Dahlan, Dean of Faculty of Allied Health Science, Chulalongkorn University for his kindness, suggestion and full encouragements throughout the period of my study as well as HPLC support.

I am also very thankful to Associate Professor Dr. Kingkaew Wattanasermkit, Department of Biology and Assistant Professor Dr. Nattaya Ngamrojanavanich, Department of Chemistry, Faculty of science for valuable comments.

Likewise, sincere thanks are also expressed to Dr. Tipayanet Ariyapitipan, the Lipid and Fat Research Center, Faculty of Allied Health Science, Chulalongkorn University for a special guide to operate the instruments throughout this thesis.

Particularly, I wish to acknowledge to my friends in Kwao Krua Laboratory, Miss Rattana Panreinsan, Miss Sutichit Sriwacharakul, Miss Warakorn Cheewasopit, Miss Wirasinee Trisub and Miss Nipaporn Chokchaikasemsuk Faculty of Science, Chulalongkorn University for their warm friendship and helpfulness.

My acknowledgement is also expressed to Research Division, Department of Science Service for time granted during my study.

Finally, I feel very indebted and heart thanks to all member in my family for their love, care, understanding, encouragement and never leave me alone.
