Appendix B

Finding the Biovolume of Phytoplankton

Finding the biovolume of phytoplankton (Rott, 1981) by measuring its width, length and thickness. Classification by mathematical shapes of the phytoplankton.

1. The shape of phytoplankton are spherical.

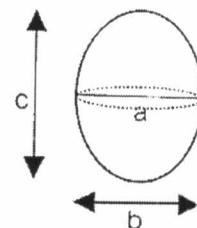

$$\text{Biovolume} = \frac{\pi d^3}{3}$$

d = Daimeter

2. The shape of phytoplankton are ellipsoidal

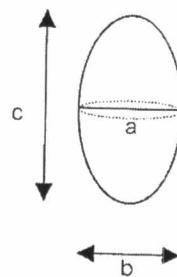

$$\text{Biovolume} = \frac{\pi c a^3}{6}$$

when $a = b$

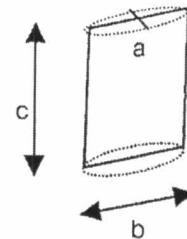

3. The shape of phytoplankton are elliptical-ellipsoid

$$\text{Biovolume} = \frac{\pi a b c}{6}$$

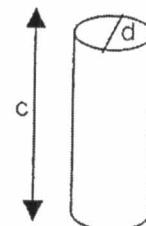

when $a \neq b$

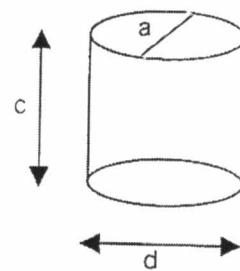

4. The shape of phytoplankton are parallelepipedal
 Biovolume = a.b.c

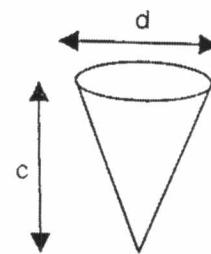

5. The shape of phytoplankton are cylindrical
 Biovolume = $\frac{\pi \cdot c \cdot d^3}{4}$

6. The shape of phytoplankton are elliptical-cylinder
 Biovolume = $\frac{\pi \cdot c \cdot d \cdot a}{4}$

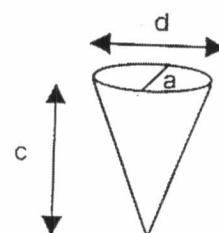

7. The shape of phytoplankton are cone
 Biovolume = $\frac{\pi \cdot c \cdot d^2}{12}$

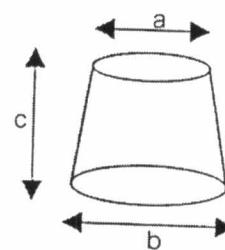

8. The shape of phytoplankton are cone-elliptic

$$\text{Biovolume} = \frac{\pi \cdot c \cdot d \cdot a}{12}$$

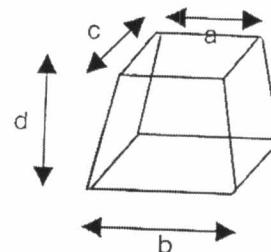

9. The shape of phytoplankton are truncated cone

$$\text{Biovolume} = \frac{\pi \cdot (a^2 + ab + b^2)}{12}$$

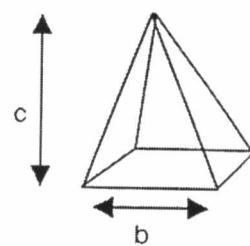

10. The shape of phytoplankton are trapezoid

$$\text{Biovolume} = \frac{1}{12}(a+b) \cdot c \cdot d$$

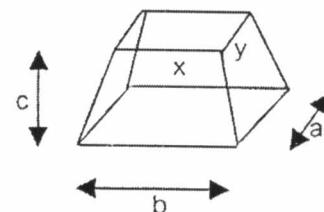

11. The shape of phytoplankton are pyramidal

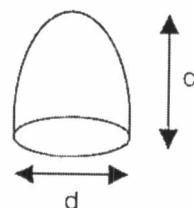

$$\text{Biovolume} = \frac{1}{3} \cdot a \cdot b \cdot c$$

12. The shape of phytoplankton are trapezoid
 Biovolume = $\frac{c(a.b+a.b.x.y+x.y)}{3}$

13. The shape of phytoplankton are parabolical
 Biovolume = $\frac{\pi.c.d^2}{8}$

ส่วนที่ 2 ความรู้ทั่วไปเกี่ยวกับการจัดการลุ่มน้ำ

กรุณาทำเครื่องหมาย ในข้อที่เห็นว่า ถูก และ X ในข้อที่เห็นว่า ผิด

ข้อ	รายละเอียด	คำตอบ	หมายเหตุ
24	การจัดการลุ่มน้ำกับการจัดการแม่น้ำมีความแตกต่างกัน โดยเฉพาะอย่างยิ่งในเรื่องของขนาดของพื้นที่ กล่าวคือ พื้นที่ของการจัดการแม่น้ำมีขนาดใหญ่กว่าลุ่มน้ำ		
25	พื้นที่ป่าดันน้ำของลุ่มน้ำเพชรบูรณ์ส่วนใหญ่อยู่ในเขตอุทยานแห่งชาติแก่งกระจานฯ		
26	เขื่อนแก่งกระจานสร้างขึ้นจากล้าน้ำเพชรบูรณ์เพื่อกักเก็บน้ำให้สำหรับผลิตกระแสไฟฟ้าและการประปาเท่านั้น		
27	หลังการประกาศตั้งอุทยานแห่งชาติแก่งกระจานขึ้น ป่าดันน้ำหายไปอย่างรวดเร็วโดยไม่เหลือซึ่งแม่น้ำแม่โขงผ่อนผันให้ประชาชนทำการเกษตรกรรมพื้นที่ดันน้ำเนื่องจากเขื่อนแก่งกระจานได้		
28	การใช้น้ำปุ๋ยเคมีเพื่อการเกษตรกรรม ไม่มีผลเสียใดๆ ต่อสิ่งแวดล้อมในพื้นที่ลุ่มน้ำเพชรบูรณ์		
29	ป่าดันน้ำสัดวันนี้ โดยเฉพาะป่าชานนิดต่างๆ ในเขื่อนแก่งกระจานยังคงอุดมสมบูรณ์สร้างรายได้ให้กับผู้ท่าอาชีพประมงได้เป็นอย่างดี ไม่แตกต่างจากช่วง 10 กว่าปีที่ผ่านมา		
30	การเกิดมลพิษในแม่น้ำเพชรบูรณ์บริเวณเขตเทศบาลเมืองเกิดจากสาเหตุที่สูตร คือ การปล่อยน้ำทึบจากอาคารบ้านเรือนที่อยู่อาศัยลงสู่แม่น้ำ		
31	การอนุรักษ์และการจัดการลุ่มน้ำเพชรบูรณ์ เป็นหน้าที่ของรัฐและคนในหน่วยงานของรัฐเท่านั้น		

ข้อ	รายละเอียด	คำอุบ	หมายเหตุ
32	ปัญหามลพิษเบigen เป็นน้ำเพชรบูรีและชายฝั่งทะเล เป็นหน้าที่ของชุมชนชาวประมงที่อาศัยอยู่ในบริเวณนั้นเท่านั้นที่ต้องซ่อมแซมดูแลรักษาและแก้ไข		
33	การก่อสร้างใด ๆ เช่น อาคารบ้านเรือน ร้านอาหาร โรงรถ สถานที่ราชการ เป็นต้น ยืนไปในส่วนของแม่น้ำหรือชายฝั่งทะเลถือว่าเป็นสิ่งไม่มีดีกุญแจและสามารถกระทำได้โดยมิต้องขออนุญาตใด ๆ		
34	การดูแลรักษาและการจัดการสู่แม่น้ำเพชรบูรี เป็นเรื่องที่ชาวเพชรบูรีทุกคนสามารถกระทำได้โดยเงื่อนไขการสร้างวินัยภายในครอบครัว โรงเรียน ที่ทำงาน ตลอดจนการเข้าร่วมในกิจกรรมต่าง ๆ ที่จัดขึ้นเพื่อการอนุรักษ์แม่น้ำเพชรบูรี		

ส่วนที่ 3 การมีส่วนร่วมในการจัดการลุ่มน้ำเพชรบูรี

การมีส่วนร่วมของชุมชนในการจัดการลุ่มน้ำหมายถึง การมีบทบาทของประชาชนในเรื่องการจัดการน้ำให้มีเพียงพอต่อความต้องการทั้งในเรื่องคุณภาพและปริมาณของน้ำ การให้ของน้ำ ตลอดจนสภาพของแหล่งน้ำในพื้นที่ลุ่มน้ำนั้น

Appendix F

Table 1 Classification of surface water.

Classification	Objectives/Condition & Beneficial Usages
Class 1	Extra clean fresh surface water resources used for : (1) conservation not necessary pass through water treatment processes require only ordinary process for pathogenic destruction
Class 2	(2) ecosystem conservation where basic organisms can breed naturally Very clean fresh surface water resources used for : (1) consumption which requires ordinary water treatment processes before use
Class 3	(2) aquatic organism of conservation (3) fisheries (4) recreation
Class 4	Medium clean fresh surface water resources used for : (1) consumption, but passing through an ordinary treatment process before using (2) agriculture
Class 5	Fairly clean fresh surface water resources used for : (1) consumption, but requires special water treatment process before using (2) industry The resources which are not classification in class 1-4 and used for navigation

Table 4 Characteristics of Common Major Associations of the Phytoplankton in Relation to Increasing Lake Fertility.

General lake trophy	Water characteristics	Dominant algae	Other commonly
Oligotrophic	Slightly acidic; very low salinity	Desmids <i>Staurodesmus</i> <i>Staurastrum</i>	<i>Sphaerocystis</i> , <i>Gloeocystis</i> <i>Rhizosolenia</i> , <i>Tabellaria</i>
Oligotrophic	Neutral to slightly alkaline; nutrient poor lakes	Diatoms, especially <i>Cyclotella</i> and <i>Tabellaria</i>	Some <i>Asterionella</i> spp., some <i>Melosira</i> spp., <i>Dinobryon</i>
Oligotrophic	Neutral to slightly alkaline; nutrient poor lakes or more productive lakes at seasons of nutrient reduction	Chrysophycean <i>Oocystis</i> , especially <i>Dinobryon</i> , some <i>Mallomonas</i>	Other chrysophyceans, (e.g. <i>Synura</i> and <i>Uroglena</i>); diatom <i>Tabellaria</i>
Oligotrophic	Neutral to slightly alkaline; nutrient poor lakes	Chlorococcal <i>Oocystis</i> or Chrysophycean <i>Botryococcus</i>	Oligotrophic diatoms
Oligotrophic	Neutral to slightly alkaline; Generally nutrient poor; common in shallow Arctic lakes	Dinoflagellates, especially some <i>Peridinium</i> and <i>Ceratium</i> spp.	Small chrysophytes, cryptophytes, and diatoms
Mesotrophic or eutrophic	Neutral to slightly alkaline; Annual dominants or in eutrophic lakes at certain seasons	Dinoflagellates, some <i>Peridinium</i> and <i>Ceratium</i> spp.	<i>Glenodinium</i> and many other algae
Eutrophic	Usually alkaline lakes with nutrient enrichment	Diatoms, much of year, especially <i>Asterionella</i> spp., <i>Fragilaria</i> <i>crotonensis</i> , <i>Synedra</i> , <i>Stephanodiscus</i> , and <i>Mesosira granulata</i>	Many other algae, especially greens and cyanobacteria during warmer periods of year; desmids if dissolved organic matter is fairly high
