## 4. other adverse drug reaction --

: monitoring gentamicin blood level and renal function closely because inactivation of aminoglycosides by penicillins appears to be related to decreased renal function. With parenteral administration , dilution appears to attenuate a physicochemical incompatibility.

Other medication. -- paracetamol 1 ampule iv. stat.

-- ranitidine ( 50 ) iv.push every 8 hr.

-- 3% kcl elixir 30 ml. feed qid pc. stat.
