APPENDIX B

B1: Calculating of pairwise Comparison

1. Collecting the data

Example: To calculate the relative weight of the 3 indicators under criterion 1.2 using the pairwise comparison, the Participant team is given the form. In this form they are asked to compare each indicator to the other 2 indicators relevant to criterion 1.2. Participant 1 voted in criterion 1.2, principle 1 following the nine-point scale as follow

Participant 1																		
Principle 1																		
Criterion 2.1																		
I1.2.1	9	8	7	6	5	4	3	2	1	2	3	4	5	6	7	8	9	I1.2.2
I1.2.1	9	8	7	6	4	3	2	1	2	3	4	5	6	7	8	9	I1.2.4	
I1.2.2	9	8	7	6	5	4	3	2	1	2	3	4	5	6	7	8	9	I1.2.4

As the above pairwise score, the comparison matrix as

	I1.2.1	I1.2.2	I1.2.4
I1.2.1	1	4*	5**
I1.2.2	1/4*	1	1/3
I1.2.4	1/5**	3	1

By displaying the data comparing I1.2.1, I1.2.2, and I1.2.4 in matrix form it is possible to calculate the relative weight of criterion 1.2. The data in the matrix can be explained using the first row as example.

- The first element is 1 because the I1.2.1 is being compared to itself.
- The second element is 4 because the Participant 1 considers I1.2.1 to be more important (value 4) than I1.2.2. Hence, a value of 4 was placed on the intersection of row I1.2.1 and column I1.2.2, and the value of $\frac{1}{4}$ (the reciprocal) was placed on the intersection of row I1.2.2 and column I1.2.1 (see the * in the display table).
- The third element in the row has a value of 5 because in comparing I1.2.1 with I1.2.4, the Participant 1 considers I1.2.1 to be more strongly important than I1.2.4. Hence, a value of 5 (reciprocal of $\frac{1}{5}$) was placed at

the intersection of row I1.2.1 and column I1.2.4 (see the ** in the display table).

2. Calculating relative weight

To calculate the relative weight of the indicators in the matrix, 3 steps are necessary:

Step 1: Calculate the sum of each column.

	I1.2.1	I1.2.2	I1.2.4
I1.2.1	1	4	5
I1.2.2	1/4	1	1/3
I1.2.4	1/5	3	1
Total	1.45	5.33	9.00

Step 2: Normalize the elements in each column by dividing the column sum (calculated in Step 1.) Add the normalized elements of each row.

	I1.2.1	I1.2.2	I1.2.4	Total
I1.2.1	0.689 (1/1.45)	0.75 (4/5.33)	0.555 (5/9)	2.00
I1.2.2	0.172 ((1/4)/1.45)	0.187 (1/5.33)	0.333 ((1/3)/9)	0.69
I1.2.4	0.137 ((1/5)/1.45)	0.062 (3/5.33)	0.111 (1/9)	0.31

Step 3: Divide the row totals in Step 2 by the number of indicators compared. In this case 3 indicators were compared.

Criterion 1.2		Relative weight
I1.2.1	= 2.00/3 = 0.665	0.665 × 100 = 67
I1.2.2	=0.69/3 = 0.231	0.231 × 100 = 23
I1.2.4	=0.31/3 = 0.103	0.103 × 100 = 10

3. Calculating the (In)consistency index (C.I.)

Using the set of indicators under criterion 1.2, the C.I can calculate as follow:

Step 1: Multiply the column total s for each indicator from Step 1 by the calculated relative weights for each indicator from Step 3, and add the results.

Using the indicators for criterion 1.2 the results would be,

$$(1.45 \times 0.665) + (5.33 \times 0.231) + (9.00 \times 0.103) = 3.1314$$

Step 2: Subtract the number of elements (indicators compared) from the result of Step 1.

$$3.1314 - 3 = 0.1314$$

Step 3: Divide the result of Step 2 by the number of indicators less one.

$$0.1314 / (3-1) = 0.07$$

Therefore, the C.I. for this matrix is 0.07 or 7%.

In general, a tolerance consistency index of 10% is set for comparisons involving no more than 9 elements.

BIOGRAPHY

The author who is responsible for this dissertation is Mr. Bhuvadol Gomontean. He was born on 20th December, 1969 at Sisaket Province. He works as a researcher at Walai Rukhavej Botanical Research Institute, Mahasarakham University since 1997.

He graduated Bachelor of Science in Major Animal Science (1993) from Faculty of Agricultural Technology, King Mongut's Institute of Technology Ladkrabang, Bangkok, Thailand. Then he graduated Master of Science in Major Zoology (Ecology) (1997) from Biology Department, Faculty of Science, Chulalongkorn University, Bangkok, Thailand.

During his Master degree, he was granted and financial supported from The Biodiversity Research and Training Program (BRT) for his thesis. In 1998, He received the Certificate in 1st Conservation Biology and Wildlife Management Training Course funding by Smithsonian Institute & Zoological Organization Thailand at Khao Kheaw Open Zoo Chonburi, Thailand. In 1999, He started his Ph.D. in Biological Sciences (Ecology) at Faculty of Science, Chulalongkorn University. He got a UDC scholarship from Mahasarakham University. Also, the Royal Golden Jubilee's grant of The Thailand Research Fund provided him financial supports for his research and fulfilled his experience at the University of Wales, Bangor.
