APPENDICES

APPENDIX A

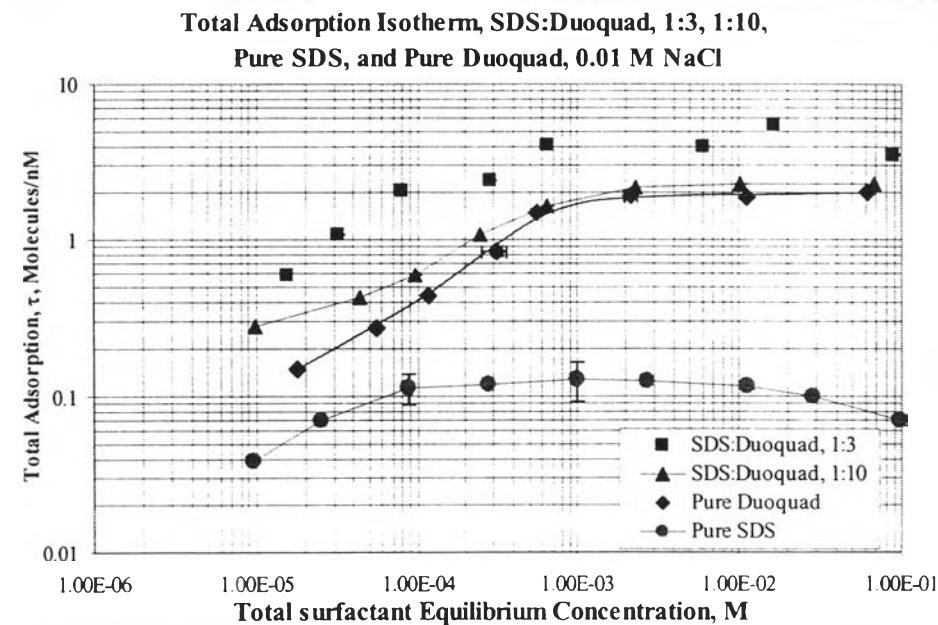

Figure A-1 Total Adsorption Isotherm, SDS/Duoquad (or PADD), 1:3, 1:10, pure SDS and pure Duoquad onto silica surface at electrolyte concentration of 0.01 M NaCl, temperature 25°C.

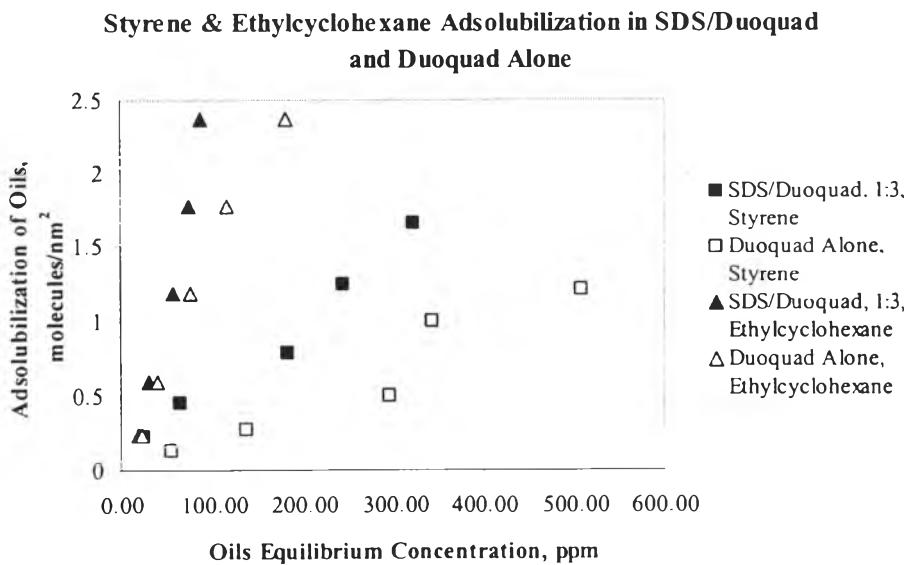

Figure A-2 Adsolubilization of styrene and ethylcyclohexane in SDS/Duoquad (or PADD) and Duoquad alone onto silica surface at electrolyte concentration of 0.01 M NaCl, temperature 25°C.

APPENDIX B

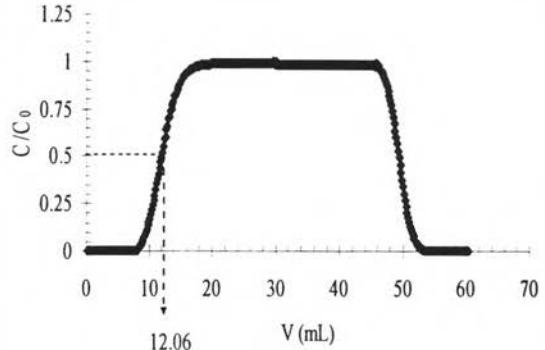

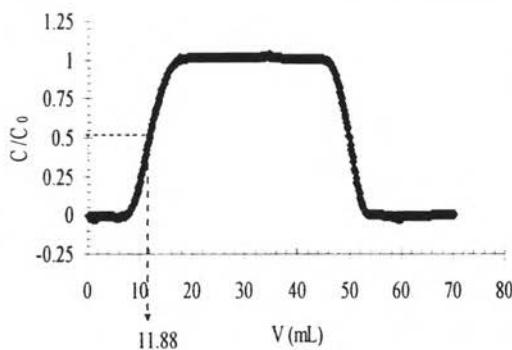

Figure B-1c Transport of tracer (0.01M NO_3) into silica-packed column for ethylcyclohexane in single PADD system.

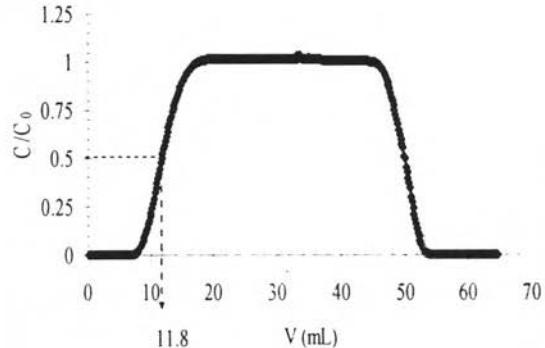

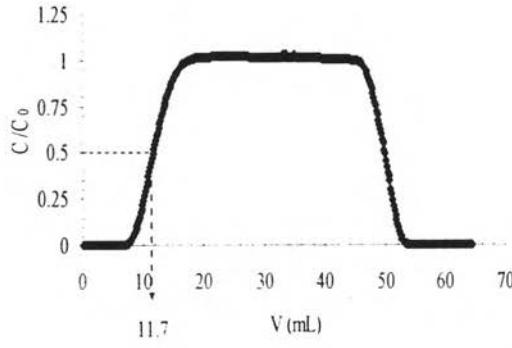

Figure B-1 Transports of tracer (0.01M NO_3) into silica-packed columns.

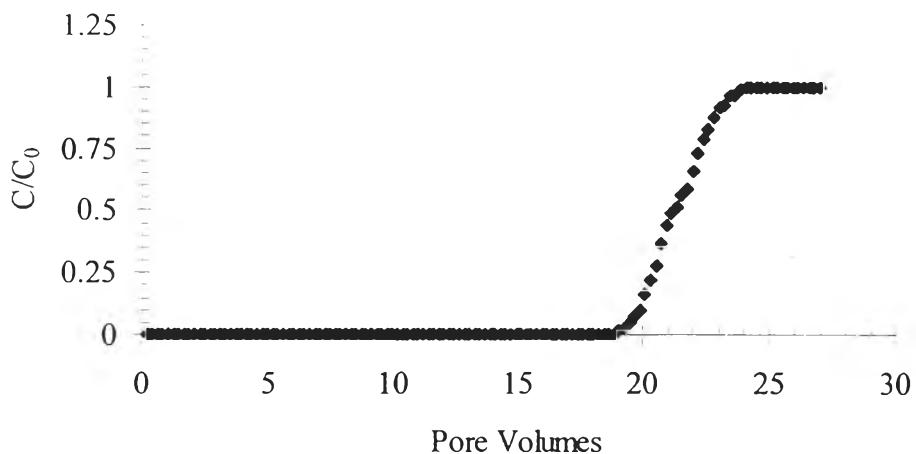

Figure B-2a Adsorption of individual cationic surfactants (PADD) 3 mM onto silica surface in the mixed surfactants system at electrolyte concentration of 0.01 M NaCl and temperature of 25 °C.

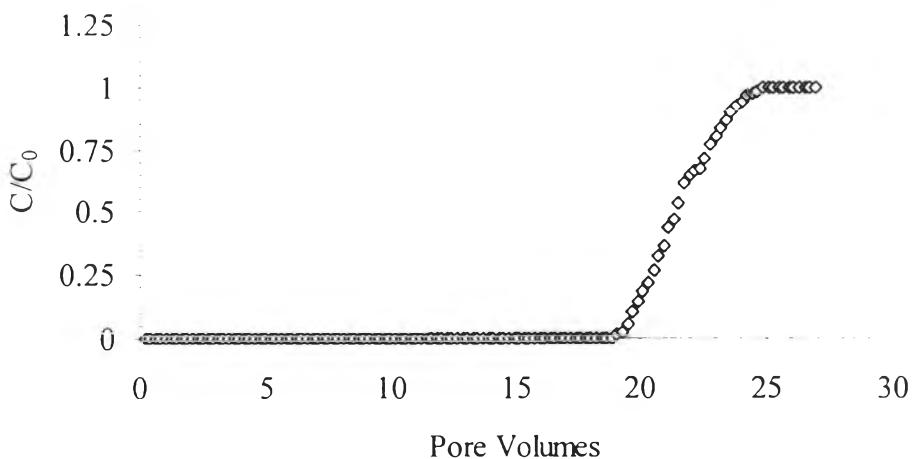

Figure B-2b Adsorption of individual anionic surfactants (SDS) 1 mM into silica-packed column in the mixed surfactants system at electrolyte concentration of 0.01 M NaCl and temperature of 25 °C.

Figure B-2 Adsorption of individual anionic and cationic surfactants onto silica surface in the mixed surfactants system at electrolyte concentration of 0.01 M NaCl and temperature of 25 °C.

APPENDIX C

Equation C-1 Calculations of the adsorption of surfactants and adsolubilization of organic solutes by using mass balance (Knox et al., 1993).

$$\text{Mass of chemical adsorbed } (q) = (\text{Mass entering column} - \text{Mass exiting column}) \\ - \text{Mass in pore water}) / Wg$$

Therefore

$$q = \frac{(C_0 \cdot V - [C_d V - C_{pw} \cdot V_{pw}])}{Wg}$$

where

q = Mass of chemical adsorbed (mole/g)

C_0 = Initial chemical concentration (M)

V = Volume of Chemical injected (L)

V_{pw} = Volume of pore water (L)

Wg = Weight of solid surface (g)

The adsorption of surfactants and adsolubilization of organic solutes can also be expressed as molecules/surface area as this equation (adapted from Scamehorn, et al., 1981).

$$q_{\text{molecules/nm}^2} = q_{\text{mole/gram}} \times \text{Avogadro's number}_{\text{molecules/mole}} \times \frac{1}{SSA} \times \frac{1}{10^{18} \text{ nm}^2}$$

Where: SSA = Specific surface area of the adsorbent, m^2/g .

Table C-1 The adsorption of single PADD 20 mM into silica-packed column at electrolyte concentration of 0.01 M NaCl and temperature 25 °C.

BIOGRAPHY

Miss Sita Krajangpan was born in Bangkok, Thailand, on 18 March 1979. In year 2001, she graduated in Bachelor of Science, Major in Environmental Science, Department of General Science, Faculty of Science at Chulalongkorn University, Bangkok, Thailand. Moreover in 1999, she got a Diploma of Analytical Chemistry Training, Major in Analytical Chemistry, Faculty of Science from Chulalongkorn University. After graduation, she had experiences in environmental issues at a consultant agency. In At the time of this study, she was an M.S. student with a major in Environmental Management at the National Research Center for Environmental and Hazardous Waste Management (NRC-EHWM), Chulalongkorn University, Bangkok, Thailand.
