ABSTRACT

5671012063: Petrochemical Technology Program

Kingkan Punta: Dissolution of Soap Scums Synthesized from Stearic Acid and Commercial Soap

Thesis Advisors: Prof. Sumaeth Chavadej, and Prof. John F. Scamehorn 69 pp.

Keywords: Amphoteric surfactant/ Chelating agent/ Dissolution kinetics/ Equilibrium solubility/ Soap scum

Soap scum is generated from long chain fatty acids of soap reacting with divalent cation, especially calcium and magnesium ion in natural hard water. It is precipitate on the surface of sink and bathtubs as a white stain. Soap scum can be removed by using an appropriate surfactant and a chelating agent. The purpose of this research was to investigate the equilibrium solubility of different soap scums from steric acid (S) or Lux commercial soap (CS) and water containing with pure Ca, pure Mg, mixed Ca and Mg at a molar ratio of Ca:Mg = 4:1 or natural hard water (NHW) with a high hardness in different solution systems: pure water pH 4, dimethyldodecylamine oxide/tetrasodium glutamate diacetate (DDAO/Na₄GLDA), and dimethyldodecylamine oxide/dissodium ethylene diamine tetraacetate (DDAO/Na₂EDTA) pH 11 were investigated at a constant temperature of 25°C. The results showed that soap scums synthesized from stearic acid in the Na₂EDTA/DDAO and Na₄GLDA/DDAO system seem to have lower equilibrium solubility than commercial soap scums. In addition, calcium commercial soap scum was higher equilibrium solubility than the magnesium commercial soap scum. The further study of dissolution rate showed that for both stearic acid and commercial soap in natural hard water is no significant different in the Na₂EDTA/DDAO and Na₄GLDA/DDAO system.

บทคัดย่อ

กึ่งกาณจน์ ปันเต: การศึกษาผลของการละลายคราบไคลสบู่ที่สังเคราะห์จากกรดสเตียริก และสบู่ที่ผลิตเชิงอุตสาหกรรม (Dissolution of Soap Scums Synthesized from Stearic Acid and Commercial Soap) อาจารย์ที่ปรึกษา: ศ.ดร.สุเมธ ชวเดช และ ศ.ดร. จอห์น เอฟ สกามีฮอร์น 69 หน้า

คราบสกปรกหรือคราบไคลสบู่เกิดจากโมเลกุลกรดไขมันของสบู่ทำปฏิกิริยากับไอออนบวกโลหะไดวาเลนต์ โดยเฉพาะอย่างยิ่ง แคลเซียมและแมกนีเซียมไอออน ซึ่งมีมากในน้ำกระด้างตามธรรมชาติ จึงเกิดเป็นคราบสีขาวขุ่นเกาะติดที่กระเบื้องหรือบริเวณพื้นที่อาบน้ำ โดยคราบไคลสบู่สามารถกำจัดได้ด้วยการใช้สารลดแรงตึงผิวที่เหมาะสมกับสารคีเลนต์ วัตถุประสงค์ของการศึกษานี้คือ การศึกษาค่าสมดุลการละลายของคราบไคลสบู่ที่สังเคราะห์ขึ้นจากกรดสเตียริก และสบู่ที่ผลิตเชิงอุตสาหกรรม ในสารละลายแคลเซียม, แมกนีเซียม, อัตราส่วนแคลเซียมต่อแมกนีเซียม 4:1 และน้ำกระด้างตามธรรมชาติ ภายใต้สภาวะต่างๆ ได้แก่ น้ำบริสุทธิ์ ที่พีเอช 4, สารลดแรงตึงผิวไคเมธิลโคเดคซิลลามีน ออกไซด์กับสารคีเลนต์เทตระโซเดียมกลูตาไดอะซิดิกแอซิด (DDAO/Na₄GLDA) และสารลดแรงตึงผิวไคเมธิลโคเดคซิลลามีน ออกไซด์กับสารคีเลนต์ไดโซเดียมเอทิลีนไดเอมีนเตตระอะซีเตต (DDAO/Na₂EDTA) ที่พีเอช 11 และอุณหภูมิคงที่ 25 องศาเซลเซียส พบว่า ไคลสบู่สังเคราะห์จากกรดสเตียริกในระบบที่มีการใช้สารลดแรงตึงผิวไคเมธิลโคเดคซิลลามีน ออกไซด์ กับสารคีเลนต์เทตระโซเดียมกลูตาไดอะซิดิกแอซิด และสารลดแรงตึงผิวไคเมธิลโคเดคซิลลามีน ออกไซด์ กับสารคีเลนต์ไดโซเดียมเอทิลีนไดเอมีนเตตระอะซีเตต ให้ค่าสมดุลการละลายต่ำกว่าไคลสบู่สังเคราะห์จากสบู่ที่ผลิตในเชิงอุตสาหกรรม อีกทั้งคราบไคลสบู่แคลเซียมจากสบู่ที่ผลิตในเชิงอุตสาหกรรมยังละลายได้มากกว่าคราบไคลสบู่แมกนีเซียมจากสบู่ที่ผลิตในเชิงอุตสาหกรรม สำหรับการศึกษ้อัตราการละลายของคราบไคลสบู่ พบว่า คราบไคลสบู่สังเคราะห์จากกรดสเตียริก และสบู่ที่ผลิตเชิงอุตสาหกรรมในน้ำกระด้างตามธรรมชาติ ไม่มีความแตกต่างกันในระบบที่มีการใช้สารลดแรงตึงผิวไคเมธิลโคเดคซิลลามีน ออกไซด์กับสารคีเลนต์เทตระโซเดียมกลูตาไดอะซิดิกแอซิด และสารลดแรงตึงผิวไคเมธิลโคเดคซิลลามีน ออกไซด์กับสารคีเลนต์ไดโซเดียมเอทิลีนไดเอมีนเตตระอะซีเตต

ACKNOWLEDGEMENTS

This research project would not have been possible without the support of many people and organizations:

First and foremost, the author wishes to express my profound gratitude and deep regards to my advisor, Prof. Sumaeth Chavadej who is abundantly helpful and offered invaluable assistance, support and guidance and also my co-advisor, Prof. John F. Scamehorn.

Deepest gratitude is also due to the members of the supervisory committee, Asst. Prof. Boonyarach Kitiyanan and Dr. Veerapat Tantayakom. If the author is without whose knowledge and assistance, this study will not have been successful.

In addition, the author would like to convey thankfulness for the scholarship and funding of the thesis work provided by The Petroleum and Petrochemical College, Chulalongkorn University, Thailand and The Center of Excellence for Petroleum, on Petrochemical and Materials Technology, Thailand for providing the fund and laboratory facilities.

For the chemicals, a thank you to Akzo Noble for the sample of Dissolvine® GL-38 (GLDA).

A recognize to all faculty members and staffs at the PPC for the knowledge that I have learnt from them as well as their help to facilitate during my thesis work.

Also, a thank you to A postdoctoral researcher, Dr.Sawwalak Itsadanont, for her supportive advice and my friends for their suggestion and recommendation.

Last but not least, the author wishes to express my love and gratitude to my families for their understanding and cheerfulness, through the duration of my studies and deeply thank to my present and former teachers who taught me with fully useful knowledge.
